

TECHNICAL SHEET
WOOD STAIN
INTERIOR WATER-BASED
PE700700 to PE700719
PE700730 to PE700749
PE700780
Colours: 300 to 319

DESCRIPTION

This water-based wood stain is ideal for any interior wood: furniture, cabinets, woodwork, mouldings, doors and floors. It is almost odourless and does not create lap marks or raise the grain.

PROPERTIES

Non-modified material
Viscosity: 10-11 sec. (FC #4 at 25°C)
Solid matter by volume: 8%
VOC content: < 450 g/L

APPLICATION

Ensure that the surface to be stained is clean, dry and free of any varnish, grease, oil, polish or wax. Sand the surface with 150-grit sandpaper. Mix the stain well. Apply it using a sponge, and wipe it off in the direction of the wood grain using a lint free cloth. Let dry for 3–4 hours. Clean the tools in soapy water. Apply a Passeport Élite varnish to seal and protect the stain.

Note that drying time may vary depending on ambient temperature.

Preparation of material and equipment

For conventional equipment (sprayer): Sprayer pressure approximately 30-35 psi, tank pressure approximately 15 psi.

STORAGE

It is recommended that you protect from frost and store in a cool place. Close container well after use. Can be stored for up to 6 months (preferably at a cool temperature).

WARRANTY

Since the application of the stain and the condition of the surface to which it is applied can not be controlled by Passeport Élite, the company's liability will under no circumstances exceed the replacement of the product.
